# Current Short Term Thinking

**Currently (900 AM EDT):** Ongoing cluster of strong thunderstorms will continue to move eastward across central Kentucky. These storms are expected to gradually diminish over the next 2-3 hours.

**This Afternoon:** Clouds are expected to partially clear across southwestern Indiana and west-central Kentucky later this morning. Showers and thunderstorms are expected to quickly redevelop by late morning and early afternoon. The area most favorable for thunderstorm develop will be mainly across areas south of the Ohio River in Kentucky. Storms will initially start out as scattered and then begin to congeal into line segments as they move eastward.
